

IN THE CLAIMS

10. (currently amended) The apparatus ~~according to any preceding~~ of claim 2, wherein the abutment means comprises a resilient member which is flexible out of the path of the device.

26. (currently amended) The apparatus ~~according to any of Claims 22 to 25~~, further comprising a power source for the electrical, electronic or electro-mechanical means.

27. (currently amended) The apparatus ~~according to any preceding~~ of claim 1, further comprising a cover for an end of the discharge channel at the mouthpiece, the cover being movable between a position covering the discharge channel and a position for the discharge said dose, whereby to allow actuation of the mechanism.

35. (currently amended) The apparatus of claim 33 ~~or 34~~, wherein the stop member comprises an elongate mounted member which is biased to engage the other rotatable means and a flap valve which is operable to allow air into a space between said opposed walls to equalise air pressure inside and outside the space and bias the elongate member to operate the cam or gear means.

36. (currently amended) The apparatus of ~~according to any preceding~~ claim 1, wherein the device is mounted under pressure resilient means.

38. (currently amended) The apparatus ~~according to any preceding~~ of claim 1, further comprising a damper means for damping movement of the device.
